

Project Report

Week 8: Testing & Debugging

Project Name: Dungeon Quest Game

1. Introduction

In Week 8, I tested my Dungeon Quest game to ensure that all the implemented features were working properly. I checked the gameplay, player controls, combat system and audio features. The main purpose of this week was to identify and fix bugs and improve the overall game experience.

2. Gameplay Testing

I tested the player movement, enemy attacks, combat system, weapon collection, and quest objectives. I also checked whether the game was running correctly without major errors. After testing all the features, I found that the game was working properly and running smoothly.

3. Bug Fixing and Improvements

During this week, I checked the game for possible bugs and stability issues. I did not find any major problems that affected the gameplay. I also made some visual and audio improvements to enhance the game experience.

- Changed the background color and background design to make the game environment more attractive.
- Changed and improved the sound effects used in the game.
- Checked the overall gameplay to ensure smooth operation.

4. Performance Optimization

I tested the game's performance, player controls, and overall responsiveness. The game was running smoothly, and all the major features were functioning properly. No significant performance issues were found during testing.

5. Conclusion

The testing and debugging process was successfully completed. The Dungeon Quest game is now working smoothly with improved background visuals and sound effects. This version is ready to be presented as the **Beta Version** of the project.

Deliverable: Beta Version
