

DUNGEON QUEST RPG

WEEK 5 & WEEK 6 PROJECT REPORT

=====

WEEK 5

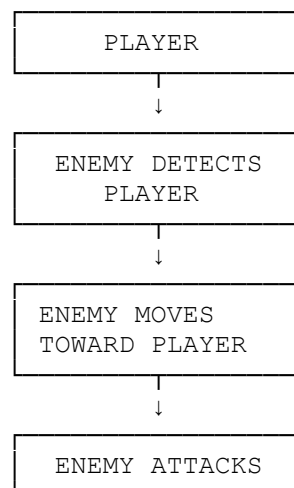

ENEMY & COMBAT SYSTEM DEVELOPMENT

ENEMY CHARACTER DEVELOPMENT

The enemy system was developed to make the dungeon more challenging and interactive.

- Three enemy characters were added to the dungeon.
- Each enemy has its own position in the game.
- Every enemy has health, speed, and attack power.
- Enemies can move toward the player.
- Enemies become inactive after they are defeated.
- Defeated enemies are removed from the active game.
- This system gives the player a clear challenge during gameplay.

ENEMY BEHAVIOR

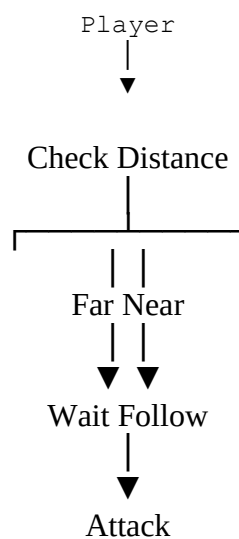

ENEMY AI SYSTEM

A simple AI system was added to control enemy behavior.

- The enemy checks the player's position.
- The system checks the distance between the player and enemy.
- When the player is far away, the enemy does not follow.
- When the player comes within the detection range, the enemy starts moving.
- The enemy changes its movement according to the player's position.
- When the enemy reaches the player, it can attack.
- This creates basic detection and decision-making behavior.

ENEMY AI FLOW

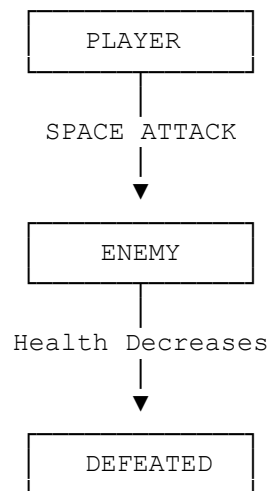

COMBAT MECHANISM

A basic battle system was developed between the player and enemies.

- The player can attack by pressing the SPACE key.
- The player needs to be close to an enemy to attack.
- An attack reduces the enemy's health.
- The enemy can also damage the player's health.
- When enemy health becomes zero, the enemy is defeated.
- After defeating an enemy, the remaining enemy count is updated.
- This creates the main combat interaction of the game.

COMBAT FLOW

WEEK 6

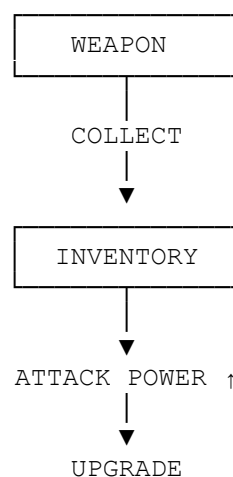

WEAPON, ITEM & LEVEL SYSTEM

WEAPON SYSTEM DEVELOPMENT

A basic weapon system was added to improve the player's combat ability.

- A weapon was placed inside the dungeon.
- The player can move toward the weapon.
- When the player reaches the weapon, it is collected.
- The collected weapon increases the player's attack power.
- The current weapon is shown on the game screen.
- The weapon can also be upgraded.
- This gives the player a way to become stronger during the game.

WEAPON SYSTEM FLOW

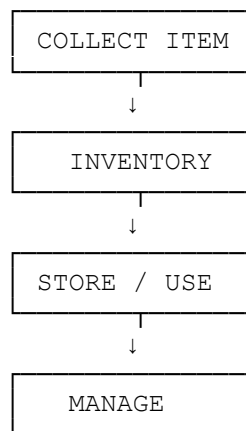

INVENTORY SYSTEM

A simple inventory system was added to store and manage collected items.

- Collected weapons can be stored by the player.
- The current weapon is saved as the player's weapon.
- The game keeps track of the collected item.
- The player can use the collected weapon during combat.
- The inventory provides a basic system for managing game items.
- More items can be added to the inventory in the future.

INVENTORY FLOW

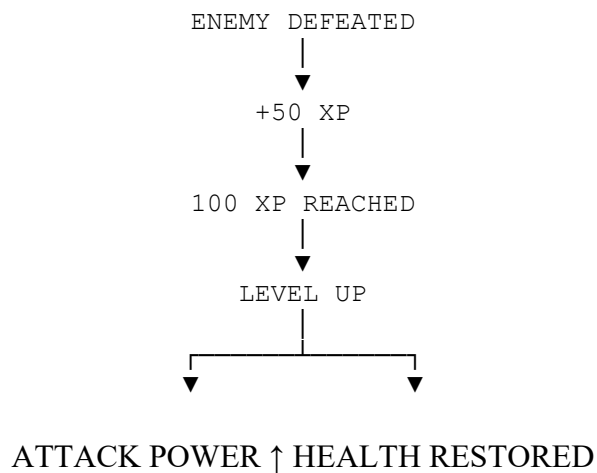

LEVEL PROGRESSION SYSTEM

An experience and level system was added to give the player a sense of progress.

- The player starts from Level 1.
- The player receives XP after defeating enemies.
- Each defeated enemy gives 50 XP.
- The player needs 100 XP to reach the next level.
- When the required XP is reached, the player levels up.
- Leveling up increases the player's attack power.
- Player health is restored after leveling up.
- This makes the character stronger as the game progresses.

LEVEL PROGRESSION FLOW

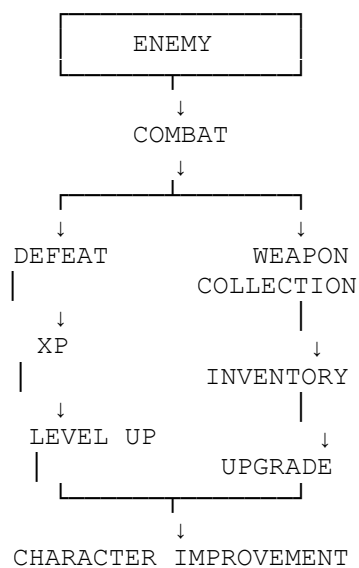

CHARACTER IMPROVEMENT

Character improvement was connected with the weapon and level systems.

- Collecting a weapon increases attack power.
- Upgrading the weapon gives additional attack power.
- Defeating enemies gives experience points.
- Gaining enough XP increases the player's level.
- Leveling up improves the player's combat ability.
- These features create a simple RPG progression system.

COMPLETE RPG MECHANICS

FINAL CONCLUSION

- Week 5 focused on the enemy and combat system.
- Enemy characters, behavior, movement, detection, and attacks were added.
- A basic combat system was developed for battles between the player and enemies.
- Week 6 focused on weapons, items, inventory, and level progression.
- The player can collect and use weapons.
- The weapon can be upgraded to increase attack power.
- The player can gain XP by defeating enemies.
- XP allows the player to level up and improve character abilities.
- The combined systems create the basic RPG mechanics of Dungeon Quest.
- These features provide a foundation for adding more characters, weapons, items, levels, and advanced dungeon gameplay in the future.
